

Table of Contents

Chapter 1 : Introduction	1
1-1 Overview of Japan	1
1-1-1 Topography	1
1-1-2 Climate	1
1-1-3 Population	3
1-1-4 Economy	3
1-2 History and current status of roads in Japan	5
1-2-1 Road developments in Japan	5
1-2-2 Road classification and administration	7
1-2-3 Traffic volume	8
1-2-4 Expenditures for road works	9
1-3 Road pavement	10
1-3-1 History of road pavement	10
1-3-2 General issue	13
References	14
Chapter 2 : Structure and design	15
2-1 Structural design	15
2-1-1 Overview	15
2-1-2 Structure of pavement	16
2-1-2-1 Overview	16
2-1-2-2 Subgrade	16
2-1-2-3 Base course	17
2-1-2-4 Binder course	19
2-1-2-5 Surface course	19
2-1-3 Design methods	19
2-1-3-1 Overview	19
2-1-3-2 Structural design conditions	20
2-1-3-3 Frost blanket	25
2-1-3-4 Design of pavement thickness	26
2-1-3-5 Selecting a pavement structure	26
2-1-3-6 Examples of structural design	30
2-1-4 Design of drainage facilities	31
2-1-4-1 Overview	31
2-1-4-2 Surface drainage	32
2-1-4-3 Subsurface drainage	32

2-1-4-4	Slope drainage	32
2-1-4-5	Drainage during construction	33
2-2	Structural design of asphalt pavement for light traffic	33
2-2-1	Overview	33
2-2-2	The structure of pavement	33
2-2-2-1	Overview	33
2-2-2-2	Subgrade	33
2-2-2-3	Base course	34
2-2-2-4	Surface course	35
2-2-3	Design method	35
2-2-3-1	Overview	35
2-2-3-2	Design <i>CBR</i>	35
2-2-3-3	Frost penetration depth	35
2-2-3-4	Design of each pavement thickness	36
2-2-3-5	Thickness of each pavement course	36
2-2-4	Drainage	37

Chapter 3 : Materials **38**

3-1	Overview	38
3-2	Bituminous materials	39
3-2-1	Overview	39
3-2-2	Pavement petroleum asphalt	39
3-2-3	Petroleum asphalt emulsion	40
3-2-4	Cut-back asphalt	42
3-2-5	Modified asphalt	43
3-3	Aggregates	46
3-3-1	Overview	46
3-3-2	Crushed stone	46
3-3-3	Crushed gravel	48
3-3-4	Gravel	48
3-3-5	Sand	49
3-3-6	Fillers	49
3-3-7	Steel slag	51
3-3-8	Special aggregates	53
3-3-9	Recycled aggregates	54
3-4	Stabilization additives	54
3-4-1	Overview	54
3-4-2	Cement	54
3-4-3	Lime	55
3-4-4	Bituminous materials	56

3-5	Resin-based binding materials	56
3-5-1	Petroleum-resin-based binding materials	56
3-5-2	Epoxy resin	56
3-5-3	Acrylic resin	56
3-5-4	Urethane resin	57
3-6	Base course materials	57
3-6-1	Overview	57
3-6-2	Granular base course materials	57
3-6-3	Stabilized base course materials	60
3-7	Other materials	61
3-7-1	Antistripping agents	61
3-7-2	Reinforced fiber materials	61
3-7-3	Medium temperature admixtures	61
3-7-4	Other additives	62
3-7-5	Waterproofing materials	62
3-7-6	Other base course materials	62

Chapter 4 : Construction equipment **63**

4-1	Overview	63
4-2	Construction equipment	63
4-2-1	Overview	63
4-2-2	Mixed-in-place equipment	64
4-2-3	Excavating and loading equipment and forming equipment	64
4-2-4	Spraying equipment	64
4-2-5	Spreading equipment	64
4-2-6	Compacting equipment	65
4-3	Construction equipment for asphalt pavement	65
4-3-1	Overview	65
4-3-2	Spraying equipment	65
4-3-3	Spreading equipment	66
4-3-4	Compacting equipment	67

Chapter 5 : Construction **68**

5-1	Overview	68
5-2	Construction plan	68
5-2-1	Drafting a construction plan	68
5-2-2	Plan items	69
5-2-3	Ensuring safety and environmental preservation	71
5-2-4	Considerations for the construction base	74
5-3	Construction of subgrade	75

5-3-1	Overview	75
5-3-2	General subgrades	75
5-3-3	Soft Subgrade	76
5-3-3-1	Overview	76
5-3-3-2	Embankment with good quality soil	76
5-3-3-3	Soil replacement method	76
5-3-3-4	Stabilization method	77
5-3-3-5	Sandwich method	80
5-3-3-6	Filter course	80
5-3-3-7	Anti-frost layer	81
5-4	Construction of sub-base course	81
5-4-1	Overview	81
5-4-1-1	Materials	82
5-4-1-2	Characteristics of each construction method	82
5-4-2	Construction with granular materials	84
5-4-3	Construction of cement and lime stabilized base courses	84
5-4-3-1	Mix design	84
5-4-3-2	Construction	86
5-5	Construction of base course	86
5-5-1	Overview	86
5-5-1-1	Materials	87
5-5-1-2	Characteristics of each construction method	88
5-5-2	Construction of mechanical stabilization	90
5-5-2-1	Mixing and spreading	90
5-5-2-2	Compaction	91
5-5-3	Construction of hot mix bituminous stabilized base course	91
5-5-3-1	Materials	91
5-5-3-2	Mix design	92
5-5-3-3	Construction	92
5-5-4	Construction of cold mix bituminous stabilized base course	93
5-5-4-1	Materials	93
5-5-4-2	Mix design	94
5-5-4-3	Construction	94
5-5-5	Construction of cement and lime stabilized base course	97
5-5-5-1	Materials	97
5-5-5-2	Mix design	97
5-5-5-3	Construction	97
5-5-6	Penetration method	98
5-5-6-1	Materials	98
5-5-6-2	Design example	99

5-5-6-3	Construction	99
5-5-7	Macadam method	99
5-5-7-1	Materials and quantity to be used	100
5-5-7-2	Construction	100
5-5-8	Crusher-run method	101
5-5-8-1	Material	101
5-5-8-2	Construction	101
5-5-9	Construction of cement-bituminous stabilized base course	101
5-5-9-1	Mix design	101
5-5-9-2	Construction	102
5-5-10	Prime coat	102
5-5-10-1	Purpose of prime coat	102
5-5-10-2	Used material and standard amount	102
5-5-10-3	Key points of consideration during construction	102
5-6	Construction of surface and binder courses	102
5-6-1	Overview	102
5-6-2	Bituminous mixtures by the hot mixing method	103
5-6-2-1	Overview	103
5-6-2-2	Types of asphalt mixtures	103
5-6-2-3	Mix design	105
5-6-2-4	Mixing and transportation	116
5-6-2-5	Paving	117
5-6-3	Bituminous mixture by the cold mixing method	123
5-6-3-1	Overview	123
5-6-3-2	Materials	123
5-6-3-3	Mix design	123
5-6-3-4	Mixing	124
5-6-3-5	Paving	125
5-6-4	Penetration macadam method	125
5-6-4-1	Overview	125
5-6-4-2	Selection of material	126
5-6-4-3	Standard proportions of materials (Example of design)	127
5-6-4-4	Construction	129
5-6-5	Surface dressing	131
5-6-5-1	Overview	131
5-6-5-2	Selection of materials	131
5-6-5-3	Standard proportions of material (Example of design)	132
5-6-5-4	Construction	133

Chapter 6 : Construction management and inspection	134
6-1 Overview	134
6-2 Concepts of management	134
6-2-1 Overview	134
6-2-2 How to perform management	136
6-3 Trial batch test	138
6-3-1 Purposes of trial batch test	138
6-3-2 Trial batch test on materials	138
6-3-3 Checking pavement equipment, etc.	141
6-3-4 Trial construction	142
6-3-5 Checking the results of a trial batch test	143
6-3-6 Establishing work standards	143
6-4 Control of finished work quality	143
6-4-1 Overview	143
6-4-2 Control items of finished work quality	144
6-5 Quality control	144
6-5-1 Overview	144
6-5-2 Means of quality control	145
6-5-3 Quality control in very small-scale construction	147
6-5-4 Considerations for quality control in each type of construction	148
6-6 Safety management and environmental measures	149
6-6-1 Overview	149
6-6-2 Safety management	149
6-6-3 Environmental measures	150
6-7 Inspection	150
6-7-1 Overview	150
6-7-2 How to inspect finished work quality and construction quality	151
6-7-3 Implementation items and methods of inspection on finished work quality	152
6-7-4 Implementation items and methods of quality inspection	155
6-7-5 Using control data	157
Chapter 7 : Pavement for specific locations	159
7-1 Overview	159
7-2 Pavement for pedestrian walkways	159
7-2-1 Overview	159
7-2-2 Selection of pavement	159
7-2-3 Pavement structure for general portions	160
7-2-3-1 Subgrade	160
7-2-3-2 Base course	161
7-2-3-3 Surface layer	161

7-2-4	Pavement structure	161
7-2-4-1	Asphalt mixture pavement	161
7-2-4-2	Concrete plate pavement	162
7-2-4-3	Interlocking block pavement	162
7-2-4-4	Decorative materials such as tiles	163
7-2-4-5	Resin spray pavement	163
7-2-5	Sidewalk pavement of bridges and footbridge	163
7-2-5-1	Pavement for sidewalk on bridge	163
7-2-5-2	Pavement of footbridge	164
7-2-6	Others	164
7-3	Bridge deck pavement	165
7-3-1	Overview	165
7-3-2	Pavement structure	165
7-3-3	Drainage	166
7-3-4	Surface treatment of bridge deck	167
7-3-5	Adhesive layer	168
7-3-6	Waterproof layer	168
7-3-7	Tack coat	168
7-3-8	Joint	169
7-4	Pavement in tunnel	169
7-4-1	Overview	169
7-4-2	Selection of pavement	169
7-4-3	Pavement structure	170
7-5	Pavement on rock bed	170
7-5-1	Overview	170
7-5-2	Pavement structure	170

Chapter 8 : Pavement with special functions and structure 172

8-1	Overview	172
8-2	Semi-flexible pavement	172
8-2-1	Overview	172
8-2-2	Materials and proportions	172
8-2-3	Construction	174
8-3	Guss asphalt	175
8-3-1	Overview	175
8-3-2	Materials	175
8-3-3	Proportions	176
8-3-4	Construction	177
8-4	Porous asphalt pavement	178
8-4-1	Overview	178

8-4-2	Pavement structure	179
8-4-3	Materials	180
8-4-4	Proportions	180
8-4-5	Construction	181

APPENDIX : Pavement recycling methods **185**

1	Overview	185
2	Plant Recycling method	185
2-1	Overview	185
2-2	Materials used in plant recycling	186
2-2-1	Overview	186
2-2-2	Reclaimed asphalt pavement (RAP)	186
2-2-3	Cement concrete recycled aggregate	187
2-2-4	Recycled base course aggregate	187
2-2-5	New asphalt	187
2-2-6	Rejuvenator	188
2-2-7	Stabilizer	189
2-3	Recycled pavement materials	189
2-3-1	Overview	189
2-3-2	Recycled base course materials	189
2-3-3	Recycled hot mix asphalt	196
2-3-4	Recycled asphalt	197
2-3-5	Quality based application	198
2-4	Mixing design of recycled pavement material	199
2-4-1	Overview	199
2-4-2	Mixing design for recycled base materials	199
2-4-3	Mixing design for recycled hot mix asphalt	201
2-4-4	Production of recycled aggregate and recycled pavement materials	206
2-4-5	Construction	210
3	In-place base course recycling methods	211
3-1	Overview	211
3-2	Types of methods	212
3-2-1	Making use of the pre-existing pavement	212
3-2-2	Methods involving preparatory stabilization	212
3-2-3	Methods involving stabilization of the existing base course alone	213
3-3	Preparatory investigation	213
3-4	Areas of application	214
3-5	Structure design	214
3-6	Raw materials	216
3-6-1	Overview	216

3-6-2	Stabilizers	216
3-6-3	In-place recycled base course aggregate	217
3-7	Mixing design	218
3-7-1	Overview	218
3-7-2	Preparation of test samples for mixing design	219
3-7-3	Mixing design for recycled treated asphalt	220
3-7-4	Mixing design for in-place recycled cement-bituminous stabilization	222
3-8	Construction equipment	225
3-8-1	Overview	225
3-8-2	In place pavement milling machine	226
3-9	Construction	226
3-9-1	Overview	226
3-9-2	The construction process without preliminary preparation	227
3-9-3	The procedures with preliminary preparation	228
3-10	Construction Management	230
3-10-1	Overview	230
3-10-2	Standard tests	230
3-10-3	Product management	231
3-10-4	Quality management	231
